

13. Implementation Plan

he purpose of a plan is to organize for action. The Tyler 21 Comprehensive Plan expresses Tylerites' values and aspirations for how the city should grow in the next 20 to 25 years. It is the result of an intensive community dialogue starting with the survey, Community Visioning Retreat and Neighborhood Open Houses, which resulted in a vision for the future and a set of principles to guide decision making. This unprecedented community process continued through the Working Group meetings focusing on specific plan elements. Throughout, the process was overseen by the Steering Committee made up of a diverse and representative group of community leaders. Assisted by staff and consultants, Tylerites have now created a framework of goals, policies and actions designed to achieve the vision. It is time to bring the Plan to life.

This chapter discusses the tools and specific activities that are needed to implement the Tyler 21 Plan and overall stewardship of the plan to keep it useful and current. The first three sections provide a general discussion of the tools needed to advance the plan, focusing especially on zoning and on urban design. As part of the Tyler 21 process, a Joint Committee on Code Review is working with a consultant to revise Tyler's land use regulations to be compatible with the Comprehensive Plan and to be more user-friendly. The fourth section describes ways to incorporate the Plan into day-to-day decision making and to assess progress and make needed revisions so that the Plan remains relevant. The last section of this chapter is a set of action plans corresponding to each of the plan elements. Although there is more detailed focus on actions that the City can take to implement the plan, many actions will also need the participation of private sector partners.

A. Stewardship of the Plan

The Tyler 21 planning process has been somewhat unusual for the very high degree of participation by the city's elected leadership, the Mayor and the City Council, and the city's administrative leadership, the City Manager and Deputy City Manager. Along with the successful public participation process, this commitment to the plan by city leaders bodes well for stewardship and implementation of this Plan. However, individuals move in and out of city government and the day-to-day demands on the attention of elected officials and staff can push the Plan into the background as a decision-making tool. It is important to create systems and procedures to make sure that the Plan is used to guide decision-making, that it is evaluated regularly to see if strategies are working and if it continues to reflect community goals. Successful implementation of the Tyler 21 Plan will require coordinated activity from many municipal departments, from elected leaders, and from partners in the private and nonprofit sectors. Accordingly, the following measures are recommended.

Review progress on the Plan in an annual City Council meeting.

A public review of how the City is using the Plan, the way Plan objectives have shaped decision-making, successes and obstacles to implementation, and new circumstances that may affect the Plan's goals and principles will keep the Plan current as officials and the public are reminded of its contents.

 Use the Plan annually in preparing and approving departmental work plans, the City's budget and its capital improvements program.

As each department prepares its work plan and its budget and capital improvements requests, it should be required to consult the Comprehensive Plan for guidance and articulate how the budget and CIP requests reflect the Plan. The Half Cent Sales Tax Board and overall CIP preparation should go through a similar process. The annual plan review session for the City Council could be held in advance of the council's consideration of the annual budget and CIP.

 Schedule a public process to review Comprehensive Plan progress and the Plan's vision, goals and principles at least every five years.

A Comprehensive Plan must reflect the needs and aspirations of community residents. It must be a flexible document that can change according to circumstances. A series of public meetings in conjunction with public surveys and/or Web-based opportunities for public input should be held at least every five years. The process should include a summary of progress made on implementing the Plan, unforeseen circumstances—both opportunities and obstacles—that affect implementation, and a review of the overall vision, goals and principles of the Plan. The public should then be asked to confirm, revise, remove or add to these aspects of the Plan.

Update the Comprehensive Plan more thoroughly at least every 20 years.
 Many communities update their comprehensive plans every ten years, but at a minimum, the Plan should be thoroughly updated at least every 20 years. This should include a major public participation process and detailed attention to every plan element.

B. Zoning

APPROACHES TO ZONING

Land use zoning first appeared in the United States in 1916. The zoning system that emerged in the early twentieth century is now called conventional or "Euclidean" zoning (after *Euclid v. Ambler*, the 1926 Supreme Court case that validated zoning as a proper exercise of municipal police power). As some of the disadvantages of conventional zoning became evident by the second half of the twentieth century, new zoning approaches emerged, including performance zoning and design-based zoning. Conventional zoning remains the basis of most zoning systems today, but many jurisdictions have added aspects of performance zoning and design-based zoning. New or rewritten codes for entire jurisdictions, like the Unified Development Code that is being created as part of the Tyler 21 planning process, are generally hybrids, balancing a mix of approaches tailored to the community.

Conventional Zoning

Conventional zoning was originally created to separate industrial and other noxious land uses from residential areas, and particularly to preserve quality of life and property values in single-family home neighborhoods. Conventional zoning regulates the uses and dimensions of development:

- · Type and mix of land uses
- Size and dimension of lots
- Type, size and height of buildings
- Distance of front, side and rear setbacks
- · Width and length of streets and sidewalks
- · Amount and size of off-street parking

Conventional zoning separates land uses deemed to be incompatible and is prescriptive, in that it specifies land uses and required maximum or minimum dimensions, parking, etc. This prescriptive character makes it easy to implement both by governments and by property owners because there are no judgment calls when the zoning

says, for example, that a building must be ten feet from the front lot line. However, conventional zoning also focuses on proscription, that is, it focuses on what is not allowed rather than articulating what is actually desired. Conventional zoning provides some certainty about development outcomes and, because it is long-established, it is familiar to everyone, but it is inflexible and inhibits design creativity. It is one, though not the only, source of the "Anywhere, USA" sprawl landscape that has produced a built environment lacking in distinctiveness. A variety of "relief valves" have been developed to try to deal with the homogenizing and inflexible outcomes of conventional zoning. Variances, conditional uses, special exceptions, bonuses and incentives, planned unit developments, and similar devices are intended to allow for more tailoring of development to particular conditions and desired results. However, they also contribute to the complexity of many conventional zoning codes.

Performance Zoning

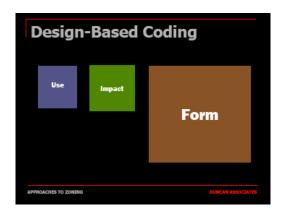

Performance zoning has its origins in industrial performance standards that identified limits on measurable industrial impacts such as noise, vibration, light, dust, smells, and so on, and that were incorporated into zoning codes for industrial land uses. This idea was expanded in performance zoning to regulation of the effects of the built environment. Unlike conventional zoning, which assumes certain uses are incompatible and separates them, pure performance zoning assumes virtually any uses can be made compatible if impacts are properly managed. Because it can provide flexibility to developers and designers to present their own solutions to mitigate impacts for administrative review, the specific

outcomes are not always predictable. Generally speaking, performance zoning requires highly-trained administrators who have the confidence of both residents and developers. Performance zoning emerged in the 1970s and 1980s. There are few places with a pure performance zoning system, but some aspects of performance zoning are incorporated into many communities' zoning codes.

Form-Based Codes

Form- or design-based zoning codes are the newest response to the rigidities of conventional zoning. They focus more on building form than on land uses and are based on a transition from low densities at the periphery to high densities at the center – of a city, a district or a neighborhood. These codes are a reaction to conventional zoning's separation of land uses, which made it impossible to build mixed-use neighborhoods and districts, and its neglect of the public realm, which resulted in visually- and functionally-impoverished environments that were often ugly and functional for

only one type of user. Form-based codes are very detailed and prescriptive about certain aspects of design and use many visuals to give a positive vision of what is desired, rather than focusing on what should be excluded. They require a design-focused community process up front. In existing communities, these kinds of codes have generally been applied in specific districts, such as a commercial corridor, rather than city-wide.

Hybrid Zoning Codes

Conventional, performance, and design-based zoning codes all have advantages and disadvantages. Because of its familiarity and long institutional history, conventional zoning is likely to remain the foundation of most zoning codes. However, performance standards and form-based elements are valuable to increase the flexibility of conventional zoning. For example, conventional zoning is organized in separate-use districts on a citywide basis and is not effective in mediating impacts at the edges of districts – which is precisely the strong point of performance zoning. Form-based codes are organized around the street and the neighborhood and are particularly good about conveying what is desired in terms of the relationship between private buildings and the public street.

TYLER'S CURRENT ZONING CODE

The zoning ordinance is one of the primary tools the people of Tyler have to implement the goals and policies of the Tyler 21 Comprehensive Plan. Chapter 10 of the Tyler Code of Ordinances currently includes zoning and subdivision regulations and code sections governing Annexation, Historical Preservation, Right-of-Way Closure and Name Change, Oil and Gas, and the Cotton Belt Train Route Depot. The last major update to the zoning code was in 1997, with further substantive amendments to various sections in 2003 and 2007. The 1997 update process was not comprehensive in the sense that it added many new provisions to an older ordinance and did not eliminate redundancies, resolve conflicting provisions, or improve on the ordinance's overall usability. The existing Tyler zoning ordinance has all the earmarks of a code that has been added to incrementally and has not been comprehensively reviewed or revised in many years. The comprehensive rewrite and reorganization of the code that is currently underway is needed if the goals of Tyler 21 are to be successfully realized.

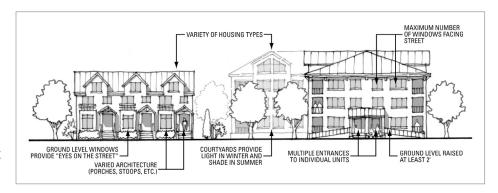

Consistency and Usability

Tyler's zoning code can benefit from many organizational improvements that will make it more usable, internally consistent, and efficient. Examples of how the ordinance can be made easier to use and understand include the following:

- Review and approval procedures can be more explicit and clearly organized. There are seven distinct review and approval procedures sprinkled throughout the ordinance, including special use permits, zoning map amendments, subdivision plat applications, and more land development permits, including grading permits and floodplain development permits. With only a few exceptions, the procedures are not labeled in the table of contents and they are scattered throughout the ordinance. What is more, the procedures themselves do not clearly describe what is required of the applicant, staff, commission members, or city councilors. The lack of a clear organizational approach and the absence of straightforward descriptions of procedures are hardly unique to Tyler. Rather these traits are symptomatic of an ordinance that has been amended over time, with no full-scale attempt to clean it all up.
- A zoning ordinance is seldom read from start to finish, which means users need tools to direct them to the sections that relate to their question or issue. An orderly table of contents and an index are two must-have components in a user-friendly zoning ordinance. Tyler's current zoning ordinance misses the mark in both respects.
- One of the simplest means of improving the usability of a zoning ordinance is to take
 numerical standards that are described in narrative form and put the information into
 one or more tables. In Tyler's case, that change can reduce that section of the ordinance from approximately 45 pages to five pages. Tables are also important for standards such as allowed uses. By displaying the uses in a matrix, code users can instantly
 see which uses are permitted where, and can easily spot errors of omission that might
 occur during future amendments.
- Graphics are most helpful for illustrating procedures and building form standards. Chapter 10 currently has some illustrations but they are of marginal quality, inconsistent appearance, and very limited utility. Graphics can be used to depict permitted building sizes, orientation, setbacks, landscaping requirements among other standards. Rules of measurement (e.g., what counts as frontage?) are also much easier to grasp when a drawing is included.
- The treatment of definitions in Chapter 10 is also emblematic of an out-of-date ordinance. There are no fewer than 14 separate sets of definitions and some terms are defined and labeled in more than one way. However, there are land uses and general terms used in the ordinance that are not included in the Definitions section and land uses that are in the Definitions section that do not appear in the use table or anywhere else in the ordinance. And finally, many of the definitions in the ordinance contain regulatory standards, which is a problem. To minimize the chance for inconsistency and confusion, standards should only appear in the regulations, not in the definitions. A definition should be value neutral; all numerical standards, dimensional requirements, etc. belong in the code itself.

Zoning Districts

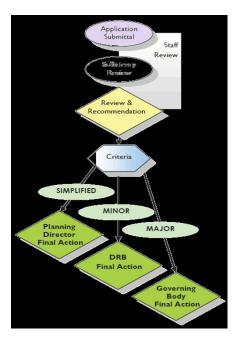

As a general rule of thumb, the fewer the zoning districts in an ordinance, the easier the regulations will be to understand and administer. Tyler currently has 24 zoning districts, including nine residential, four commercial,

two office, five special purpose (e.g., educational, health services), and four planned districts. While the number of zoning districts in the Tyler ordinance is comparable with other cities, there are several opportunities where existing zoning districts can be eliminated and combined with another district of the same basic type. An easy way of determining which districts may no longer be needed is to look at a zoning map to see which districts are in use and to what extent. In addition, where the dimensional and density requirements for districts are similar and there is little variation from one district to the next, there is an opportunity to combine districts. At the same time, the Tyler 21 Comprehensive Plan recommends that several new district types be created: a downtown arts and culture district; neighborhood conservation districts; mixed-use districts; and commercial corridor overlay districts.

The Updated Code: Hybrid Zoning in a Unified Development Ordinance

The updated zoning ordinance being prepared for Tyler will be a unified development code, which is to say that it will combine all development regulations, including zoning and subdivision, street and sidewalk standards, landscaping and tree protection, parking, open space, sign regulations, stormwater and erosion

Tyler's zoning ordinance can be made more user-friendly by including illustrations.

control provisions into a single document. The foundation of the ordinance will continue to be the conventional zoning model, but aspects of performance zoning and form-based zoning will be incorporated where they would be more effective in promoting the goals of the Tyler 21 Comprehensive Plan. The new code will have the following characteristics:

- A single, uniform set of definitions and terminology
- · A refined list of zoning districts and a new land use classification system
- Integrated procedures with step-by-step details on the sequence of development approvals
- Illustrated design guidelines and standards
- A detailed table of contents and index

- Hyperlinks to code sections (in the electronic version) and site design standards
- A completely new look featuring a new and improved page layout and content described above.

The current ordinance does not enable the City to implement new development concepts in the Plan, for example, creation of a Business, Arts and Culture mixed-use district downtown, as well as other mixed-use districts, new design and development guidelines for commercial areas, corridors and mixed-use districts, the establishment of neighborhood conservation districts, subdivision design modifications and alternative options. It would be difficult to implement these objectives using the existing ordinance. The new strategies under consideration for the updated code are directed towards creating more compact and mixed-use development at human-scaled environments with more connectivity.

C. Urban Design

Many of the issues central to Tyler 21 require new approaches to urban design as an integral part of the implementation program. But what is "urban design"? In the broadest terms, urban design is the process that shapes urban environments at a variety of scales, from regions and cities as a whole, to city districts or neighborhoods, down to individual lots. Urban design is concerned with the physical character of spaces in three dimensions. It is not, as sometimes thought, simply about visual appearance or style. Urban design affects many aspects of how we experience places, including how the different elements of spaces, such as buildings, sidewalks, roads, parking lots, and parks, relate to one another; how spaces function in facilitating, directing or obstructing people's activities; and how spaces express aesthetic values. Although urban design can be practiced both in publicly-owned and privately-owned places, the focus here will be on the public realm and on private places that are commonly open to the public, such as retail developments.

Many aspects of the Tyler vision and principles focus on issues that are the province of urban design: creation of beautiful public places; growth that reflects sense of place and community; connected networks of parks and trees; a reinvigorated downtown and North End; preservation of historic resources; improvements in transportation and a more pedestrian- and bicycle-friendly community. Although this section began with a call for "new approaches" to urban design, in many ways Tyler needs to return to some of the urban design and placemaking strategies that were prevalent before 1960. The older parts of the city were created at a human scale—laid out in a connected grid of streets with small blocks, sidewalks and tree-lined streets, parks and schools as the center of neighborhoods, shops clustered together and built to the sidewalk, and streets that accommodate cars without being dominated by cars. Tylerites are justifiably proud of the city's many beautiful residential neighborhoods and its identity as a green city of trees and flowers. However, the public realm of streets and commercial areas often does not reflect this beauty and land uses are organized in ways that limit connections and increase congestion. During recent decades, both residential and commercial development has been laid out in bigger blocks, with fewer connecting streets, limited or no facilities for pedestrians, and a general orientation to accommodate vehicles over people.

Adherence to a few basic interrelated urban design principles in the future will make a very big difference in achieving the goals of Tyler 21:

· Focus on creating human-scaled environments.

What this means is that places should be designed primarily at a scale that is comfortable for people, rather than at a scale primarily focused on vehicles. This is true even for major roads like South Broadway Avenue and Loop 323 and the retail areas that line these roads. It is hard for many people to imagine that the environment on these roads could ever change, but over time, by focusing on how to make both the street itself and the retail areas more functional and attractive for people, these districts will become even more successful than they already are. A central design question throughout Tyler (and everywhere else) is how to provide vehicle access and storage with a minimum impact on pedestrians and the quality of the environment.

Focus on streets as three-dimensional shared spaces.

Streets are the most important public spaces in any city and are made up of the travel right-of-way (including sidewalks) and the land, landscaping and buildings that line the travel way. Except for limited access highways, the travel way should be shared and accessible to vehicles, bicyclists and pedestrians. The vertical elements at the edge of the street—buildings and street trees—should create a sense of enclosure. Researchers have found that the optimum relationship of the vertical (height of buildings) to horizontal (width of street) dimensions in a street corridor should be no more than 1:4. Street trees spaced no

New development in Southlake, TX includes streets at a scale comfortable for pedestrians and amenities such as sidewalks, lighting, and street trees.

more than 35 feet can also create this sense of enclosure, even if the height to width ratio cannot. Tyler's major roads are very wide, with rights-of-way of 110 and 150 feet. On most of these streets, buildings no more than 35 feet tall are set far back from the street behind large parking lots so the effective width of the paved area can be as much as 1,000 feet. Among other things, this lack of enclosure encourages higher vehicle speeds.

Create walkable environments.

Everyone is a pedestrian at some point during every day. Walkable environments—connected, safe, comfortable, appealing—are important in both the public and semi-public realms and have been emphasized throughout this plan. In the survey, Community Visioning Retreat and open houses, Tylerites were clear about their desire for more walking opportunities. The City already requires sidewalks in new developments and residential developers have begun to provide walking trails as an amenity. Walkability depends on a variety of other design choices as well, such as block size. Smaller blocks provide more intersections and more opportunities for direct routes to destinations. In commercial areas, visual interest, safe crossings, shelter from sun and rain, human-scaled lighting, and other amenities can keep people walking.

Kierland Commons in Phoenix, AZ, uses a variety of elements to provide shade for people and cars.

Planted pedestrian paths have been added to mall parking lots in Massachusetts to improve pedestrian safety and circulation.

Rows of trees along older highways with typical suburban-style retail development can provide a sense of enclosure and scale. (Route 9, Framingham, MA)

With good signage directing drivers to the right location, parking to the rear of retail buildings can be very successful.

Urban Design Strategies to Implement the Principles

While it is important to tailor design approaches to particular site circumstances and needs, there is a set of well-known urban design strategies that may be used on a voluntary basis in Tyler in order to achieve the goals of the Tyler 21 Plan.

- Plant trees. Planting trees along streets and roads and in parking lots is one of the easiest ways to enhance the public realm, create comfortable environments, and reduce heat effects. Trees should be chosen for their suitability to the task. For example, street trees along sidewalks should be chosen to have canopies sufficiently high and broad to provide shade to pedestrians.
- Bring buildings to the street. In both the older and newer parts of the city, buildings should be located at the sidewalk, behind a small landscaped or hardscape setback, or, in a few cases along major arterials, behind limited, single-loaded parking.

New development should be close to sidewalks and have on-street or rear parking.

- Put parking to the side, to the rear, in structures or underground, with clear signage to direct motorists to parking. Parking is necessary but should not dominate street frontage. Rear parking should not, however, result in buildings that turn their backs on the street frontage.
- Use more pedestrian-friendly site design within retail centers. Designated pedestrian pathways along buildings and through parking lots towards building entrances, pedestrian precincts, and pedestrian connections from sidewalks directly to stores can make retail centers more attractive. In large centers, pedestrian paths at least every 300 feet to connect with entrances is a common rule of thumb.
- Create visual interest in buildings by avoiding blank facades. Articulated and
 modulated façades, windows and transparency attract interest by providing a sense of
 activity within.
- Design compact subdivisions for walkability, diversity, and connectivity.

 Smaller block sizes, averaging of lot sizes to allow for different housing types, narrower streets, limits on cul-de-sacs and dead end streets, provisions for future connectivity and dedication of open space will create subdivisions that, when connected together, create neighborhoods.

Buildings located at the sidewalk give a sense of enclosure to this new street in Frisco, TX.

The face that Southlake Town Square in Southlake, TX turns to the four-lane highway at its edge is of a series of buildings with architectural interest, and windows and doors opening to the sidewalk—not large parking lots in front of boxy buildings with blank walls.

A wide sidewalk, benches, shade, and human-scale lighting provide comfortable conditions for pedestrians in Addison, TX.

D. Sampling of Potential Implementation Tools

In addition to tools referenced in the Action Plans, there are a variety of tools available to help Tyler achieve the broad range of land use and programmatic goals in the Comprehensive Plan. The Tyler community prefers using incentives and encouragement to achieve desired outcomes and the most important implementation tool that city government has is its ability to decide where and how to make public investments—in infrastructure, in programs, and in development assistance. Public investments coupled with the Plan tell the development community that local government will do what it can to support new private investment that will implement the plan. A representative list of regulatory, financial and incentive-based types of tools includes:

- **Zoning and regulations.** Most people think of zoning as the preeminent implementation tool for a land use plan and zoning is certainly one of the foundations for effective implementation of a plan. Because zoning regulates land use decisions and activities, implementation of the plan will involve adjustments to zoning to make it compatible with the plan's vision, goals, and actions.
- **Urban design strategies and design review.** Better design of public and semipublic places, as well as the way that private property meets public spaces, is critical to achieving the more functional, walkable, and distinctive community called for in the Tyler 21 Vision and Principles.
- Capital Improvement Plan and Master Street Plan. The Comprehensive Plan goals, principles and recommended actions should be consulted as the capital improvement plan is modified every year and as decisions are made about when and how to build out the Master Street Plan. The Tyler city government has made a commitment to retire debt and pay cash for capital improvements from the Half Cent Sales Tax, but the water and sewer enterprise funds do issue bonds to pay for capital improvements. Consolidation of capital improvements into one interrelated plan will help ensure consistency with Tyler 21 goals.
- Long-range transportation plan and the TIP (Transportation Improvement Program). Federal and state funds for transportation improvements become available through the MPO planning process. Decision-making for Tyler transportation needs within the MPO should be coordinated to achieve Tyler 21 goals.
- **Grant programs.** Federal Community Development Block Grant (CDBG) funds help pay for housing and community development assistance to low- and moderate-income households and neighborhoods predominantly occupied by those households. Tyler currently receives approximately \$400,000 annually in CDBG funds. It also receives federal HOME funds for acquisition, rehabilitation or new construction of homes for low- and moderate-income households. Competitive grant programs for economic development and other programs are available from the federal government, as well as some from state agencies such as the Texas Parks and Wildlife Department.

- **Private and nonprofit funds.** Tyler has a number of generous foundations that so far have not focused very much on aspects of the physical development of the city. However, there could be many opportunities for partnership in improving parks and public spaces, contributing to downtown and North End revitalization, and other Tyler 21 goals.
- Public improvement districts. Tyler's Neighborhood Empowerment Works (NEW)
 program targets a specific neighborhood every year for focused attention and services.
 The City Council could also designate certain areas as needing additional services or
 infrastructure and assess property owners in these areas according to the level of benefit they receive.
- **Tax abatements.** Property tax abatements can be granted as an incentive for desired projects. The City already provides significant tax abatements for local historic landmarks.
- **Tax Increment Financing (TIF).** TIF districts are created by the City Council to underwrite infrastructure improvements designed to encourage redevelopment. The new tax increment above the pre-investment taxable value is directed to pay for the cost of the public improvements.
- **Land assembly/land banking.** For desired projects and investments, the City can help developers by facilitating land assembly or land banking properties.

E. Action Plans

The implementation matrices that follow were developed to provide more specific guidance about how to put the plan to work and begin transforming ideas into action. The plan has a long-term horizon, looking ahead to 2030, but it also includes a number of short- and medium-term actions that are necessary prerequisites to long-term results. Each action plan includes goals, outcomes ("what"), strategies and actions ("how"), responsible parties ("who"), a target timeline and potential resources.

	TY	LER 21 DOWNTOWN TYL	ER ACTION PLAN		
Sho	rt-Term Actions (2007-20	11) Intermediate A	Actions (2012-2017)	Long-Term A	Actions (2018+)
GOAL	WHAT	HOW	WHO	TARGET TIME- LINE	POTENTIAL Resources
Create a full-service, mixed-use "Desti- nation Downtown" that functions as the center of the region.	Convene major city institutions and stake-holders around the theme of downtown renaissance and revitalization.	Conduct meetings of major stakeholders to discuss downtown revitalization.	Mayor and City Council; Major stakeholders; Heart of Tyler Main Street	2007-2009	Current staff time; volunteer time
		Create a public-private partnership or development corporation to lead the revitalization of downtown.	Mayor and City Council; Major stakeholders; Heart of Tyler Main Street	2009-2011	General funding; TIF funding; partner- ships with other organizations and stakeholders
	Create a regula- tory environment that will attract desired development types and result in desired design outcomes.	Revise zoning in the downtown planning area to create a new Arts, Culture and Business District with design standards and guidelines.	Mayor and City Council; Planning and Zoning Com- mission; Joint Committee on Code Review; staff des- ignated by City Manager	2007-2008	Current staff time; consulting services; general funding
	Maintain up-to-date information on vacant and underutilized land in downtown and throughout the city.	Establish a land monitoring and tracking capacity in city government.	Staff designated by City Manager; Heart of Tyler Main Street	2008	New staff resources; general funding; partnerships with other organizations
		Establish a downtown GIS archive that is updated at least monthly.	Staff designated by City Manager; Heart of Tyler Main Street	2008 and ongoing	Current staff time; partnerships with other organizations
	Make infrastructure and streetscape investments that support revitalization.	Create a Tax Increment Financing (TIF) district to support revitalization investments in streetscape and infrastructure.	Staff designated by City Manager; County Commis- sioners Court; TJC Board of Regents	2007-2008	Current staff time; consulting services; general funding
		Commission a streetscape plan that includes continuous, high-quality sidewalks, street trees, safe pedestrian crossings, street furniture, parks and plazas.	Staff designated by City Manager; Heart of Tyler Main Street	2009-2011	New staff resources; general funding; partnerships with other organizations
		Upgrade utility infrastructure, as needed, to support new residential and other development.	Staff designated by City Manager	As needed, starting in 2008	Utility funding
	Determine appropriate staff support to promote downtown economic and cultural development and assistance.	Hire staff or contract for assistance to coordinate city government and private sector downtown revitalization activity.	Staff designated by City Manager	2008-2009	New staff resources; general funding; partnerships with other organizations

GOAL	WHAT	HOW	WH0	TARGET TIMELINE	POTENTIAL RESOURCES			
	Collaborate with Historic Tyler, Inc. to organize public events that cel- ebrate Tyler's his- tory and historic neighborhoods.	Work with Historic Tyler, Inc. to offer public events that highlight Tyler's historical role as a regional center and its many historic neighborhoods.	Historical Preservation Board; Historic Tyler; Staff designated by City Manager	2009 and ongoing	Current staff time; possible consulting ser- vices; possible general funding; partnerships with other orga- nizations			
Enhance public aware- ness of the economic benefits of historic preservation in Tyler.	Expand the local landmarks program by contacting owners of key historic properties annually with information about the benefits of local landmark designation.	Contact the property owners of "high" and "medium priority" properties on an annual basis to urge them to protect their properties by entering them in the local landmarks program (or even to work together to create a local historic district).	Historical Preservation Board; Historic Tyler; Heart of Tyler Main Street; Staff designated by City Manager	2008 and ongoing	Current staff time; partner- ships with other organizations			
		Provide materials that outline the local tax benefits that are available to landmarked properties, along with a brief description of the designation process, and information on how the City can help property owners with the designation process.	Staff designated by City Manager	2008 and ongoing	Current staff time			
		Post these materials on the Department of Planning and Zoning's webpage for viewing and downloading.	Staff designated by City Manager	2008 and ongoing	Current staff time			
		Provide contact information (phone number and e-mail address) for the staff person who advises the HPB in all materials on the City's website and in phone directories.	Staff designated by City Manager	2007 and ongoing	Current staff time			
	Continue to offer and publicize historic preservation tax incentives.	Continue the 50% exemption (50% of the property's entire assessed value) to encourage owners to keep their properties in the local landmarks program and maintain them.	Mayor and City Council	2007 and ongoing	Current staff time			
		Continue the 100% tax abatement for up to five years for improvements to properties in the local landmarks program.	Mayor and City Council	2007 and ongoing	Current staff time

GOAL	WHAT	ноw	WH0	TARGET TIMELINE	POTENTIAL Resources				
BUSINESS, RETAIL AN	D MIXED USE AREAS								
Concentrate commercial development in compact, mixed-use districts interspersed with lower-density uses and open space along corridors rather than commercial strips.	Establish mixed-use districts at major arterial intersections and other appropriate locations.	Consult the Future Land Use Guide on applications for new zoning and establish an overlay district on major streets that provides for appropriate design standards and clustering of commercial development.	Mayor and City Council; Planning & Zoning Com- mission; Staff designated by City Manager	2007-2008 and ongo- ing	Current staff time				
		Establish transition zones from higher to lower heights, densities and impacts and design guidelines and standards in mixed-use districts.	Mayor and City Council; Planning & Zoning Com- mission; Joint Committee on Code Review; Histori- cal Preservation Board; Staff designated by City Manager	2007-2008	Current staff time; consulting services; general funding				
Improve the function and design of commercial areas.	Establish zoning overlay districts with improved design standards as properties redevelop on arterial roads.	Encourage design standards for improved access management, build-to lines and parking to the side and rear, pedestrian amenities, and similar improvements.	Mayor and City Council; Planning & Zoning Com- mission; Joint Committee on Code Review; Histori- cal Preservation Board; Staff designated by City Manager	2007-2008	Current staff time; consulting services; general funding				
Use public invest- ments to promote compact mixed-use districts.	Locate public buildings to anchor mixed-use districts and invest in the public realm to encourage development and redevelopment by property owners.	Target public investment to areas where the City wants to see mixed-use development and redevelopment, rather than isolated, lowdensity sites.	Mayor and City Council; Planning & Zoning Com- mission; Staff designated by City Manager	2008 and ongoing	Current staff time
